

## XPERIA CONFIGURATOR CLOUD STANDARD DEPLOYMENT

Use the Xperia Configurator Cloud tool to remotely deploy device profiles to Xperia™ devices.

**Xperia Configurator Cloud (XCC)** is a cloud service that can be used for configuring and deploying a configuration to multiple devices within your business. As an administrator you manage device functionalities such as apps and settings in each device.

### XPERIA CONFIGURATOR CLOUD QUICK GUIDE

#### A Sign up

1. Go to:  
<https://xperiaconfiguratorcloud.sonymobile.com>
2. Select **Sign up** and input your account information.
3. Click **Sign up** to receive an email with a link to the account activation page.
4. On the account activation page, enter your password and click **Activate** to be directed to the **Login** page.

#### B Create a profile

1. Log in to your account and click **Profiles**.
2. To add a new profile, click **Profiles > New**.
3. Select the feature you want to configure and turn on the switch to enable editing.
4. Configure the settings for the selected feature.
5. When you have configured all the features, click **Finish** to register the profile.

#### C Add employees & assign profile

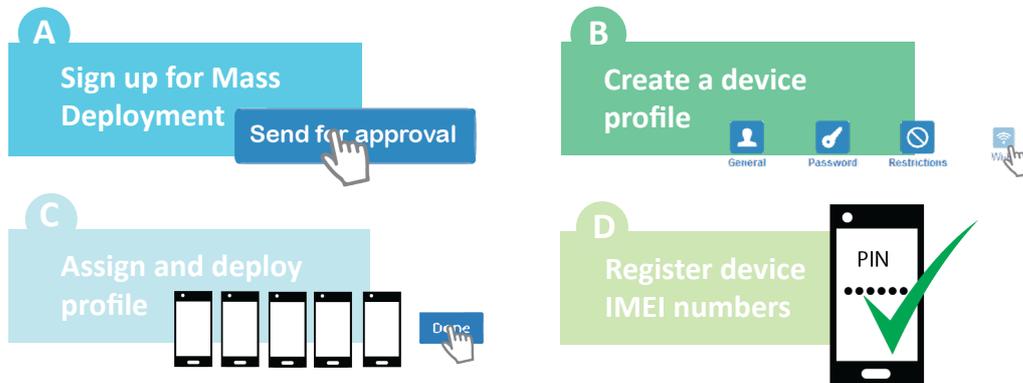

1. To add a new employee click **Employees > New**.
2. Fill in the employee's email address.
3. Select a default profile (this is not obligatory, but if you select a default profile here, you can skip steps 1-3 of the **Deploy** instructions in section **D**).
4. Click **Next**, then click **Yes** to send an email with activation instructions to the employee.
5. Select the **PIN** button, then click **Send email**.

#### D Deploy

1. When the employee has activated their device according to the instructions in the email, click **Devices** where activated devices are listed.
2. Mark the checkbox for one or more devices.
3. Select a profile from the drop-down menu, then click **Submit**.
4. When the device user accepts the profile, it is downloaded and installed on the device.

## XPERIA CONFIGURATOR CLOUD MASS DEPLOYMENT PROGRAM

Use the XCC Mass Deployment Program to easily deploy a large number of Xperia™ devices.

**Xperia Configurator Cloud (XCC)** is a cloud service that can be used for configuring and deploying a configuration to multiple devices within your business. As an administrator you manage device functionalities such as apps and settings in each device. To easily deploy a large number of Xperia™ devices, use the **XCC Mass Deployment Program**.

### MASS DEPLOYMENT QUICK GUIDE

#### **A** Sign up

1. Sign in at:  
<https://xperiaconfiguratorcloud.sonymobile.com>
2. Select **Mass deployment > New**.
3. Specify the amount of devices you want to register, then click **Send for approval**.
4. When you have been approved, you will be notified by email. While you wait for approval you can create, assign and deploy a profile as described in sections **B** and **C**.

#### **C** Assign & Deploy

1. Click **Employees**.
2. Add employee email addresses.
3. Select a default profile and click **Next**.
4. Select **Mass Deployment Program PIN**.
5. Click **Done** to send an email with the PIN and instructions for how to deploy the profile.

#### **B** Create a profile

1. Log in to your account and click **Profiles**.
2. To add a new profile, click **Profiles > New**.
3. Select the feature you want to configure and turn on the switch to enable editing.
4. Configure the settings for the selected feature.
5. When you have configured all the features, click **Finish** to register the profile.

#### **D** Register devices

1. When you have received the notification of approval, select **Mass deployment > New**.
2. Enter the IMEI numbers of the devices that you want to deploy.
3. Click **Done** to register the devices.
4. When the device is started and connects to a network, the employee enters their PIN to automatically install the profile on the device.
