Product overview

Introduction

The SmartBand Talk SWR30 is both a unique standalone device as well as a companion product that allows completely new interaction possibilities with your Android phone or tablet (Android version 4.4 or later). The SWR30, when worn on your wrist, can monitor your body movements and interact with your Android smartphone or tablet to generate data about your life and habits. For example, the SmartBand Talk counts your steps and records data about your physical activities while you sleep, walk, run or jump. Use it to set personal goals and then track your progress.

The SmartBand Talk comes with a smart E Ink[®] display that displays time, notifications and the status of monitored activities. With a host of applications available for your SmartBand Talk on Google Play™*, it's easy to add new features and explore new ways to get the most out of your accessory. And with an IP rating of IP68, making it dust tight and highly water resistant, your accessory is well equipped to take whatever life throws at it.

The accessory also helps you to stay organised and manage common day-to-day tasks. For example, you can use it to handle phone calls and text messages.

* This service is not available in all markets.

Facts – dimensions, weight, performance

Processor	ARM Cortex-M4 32-bit processor
Size (module)	47.5 x 22.3 x 9.5 mm
Length of wrist band	
Large size	255 mm
